

My Submissions for ICCSE 2026

Using the submission author environment you can view or manage your submissions to ICCSE 2026. You can make new submissions or update your previous submissions.

To **make a new submission** click on "New Submission".

To **view or update a submission** click on the corresponding "view" icon.

Additional information about submission to ICCSE 2026 can be found at the [ICCSE 2026 web page](#).

Questions about submissions can be sent to the conference contact email(s) iccse18@outlook.com.

Please note that if you do nothing (not even click on the menu) for more than two hours, your session will expire and you will have to log in again.

43	Samiksha Aggarwal, Bhuvain Jhamb and Daksh Chawla	Advantages and Disadvantages of Modern Language Models		

Dear authors,

We received your submission to ICCSE 2026 (The 20th International Conference on Computer Science and Education):

- Authors: *Samiksha Aggarwal , Bhuvain Jhamb , Daksh Chawla*
- Title: *Advantages and Disadvantages of Modern Language Models*
- Number: 43

The submission was uploaded by Samiksha Aggarwal . You can access it via the [ICCSE 2026 EasyChair Web page](#).

Thank you for submitting to ICCSE 2026.

Best regards,
EasyChair

Paper Acceptance Letter of the 20th International Conference on Computer Science & Education (ICCSE 2026)

To: Bhuvain Jhamb <bhuvain228.be22@chitkara.edu.in>

Dear Bhuvain Jhamb,

We are delighted to inform that your paper has been accepted for inclusion in 2026 the 20th International Conference on Computer Science & Education (ICCSE 2026), which will be held in Budapest, Hungary, during July 21-25, 2026.

ICCSE 2026 brings together educators, researchers and practitioners worldwide to discuss new research results, perspectives on future developments, and innovative applications relevant to computer science, education, and related areas. The accepted manuscripts will be included in the conference proceedings. Kindly follow the comments (shown in the EasyChair submission system) from the reviewers and prepare the final paper according to the IEEE conference template. Please note that a paper is limited to 6 proceedings pages. An additional charge will be required if the paper length exceeds this limit. A detailed instruction for camera-ready submission, eCopyright transfer, and registration will be sent to you soon.

We look forward to seeing you at the ICCSE 2026 in beautiful Budapest, Hungary. If you have any additional questions, please feel free to contact us. For more information regarding the invitation letter, registration, and accommodation reservation as well as technical and social programs, please visit the ICCSE 2026 conference web site at <http://www.ieee-iccse.org> or email us to iccse@outlook.com.

Paper ID: 43

Title: Advantages and Disadvantages of Modern Language Models

Author(s): Samiksha Aggarwal, Bhuvain Jhamb, Daksh Chawla

Sincerely,

Levente KOVÁCS

General Chair, IEEE ICCSE 2026

Dear Bhuvain Jhamb,

On behalf of the organizing committee, we are pleased to inform you that your paper listed below has been accepted for presentation in ICCSE 2026.

Please carefully review the anonymous review comments enclosed in this email. You are required to revise your paper strictly according to the reviewers' suggestions and prepare the following 2 documents:

1. Revised full paper (final version) via your EasyChair account. Template can be downloaded in <https://www.ieee.org/conferences/publishing/templates.html>.
2. A point-by-point response letter to all reviewer comments, explaining how you have addressed each comment in the revised manuscript. Please send the response letter to iccse@outlook.com and name the file in the format [Response Letter + PaperID].

Please submit the 2 documents before the final versions deadline (Jun. 20, 2026). No new research results are allowed in the revised version. Failure to submit the revised paper and response letter on time will be regarded as withdrawal, and your paper will not be included in the conference proceedings.

Thank you for your contribution to ICCSE 2026.

Best regards,
ICCSE 2026

SUBMISSION: 43
TITLE: Advantages and Disadvantages of Modern Language Models

----- REVIEW 1 -----

SUBMISSION: 43
TITLE: Advantages and Disadvantages of Modern Language Models

----- Overall evaluation -----

SCORE: 1 (weak accept)

----- TEXT:

This paper provides a comparative analysis of large language model architectures, focusing on retrieval-augmented generation and extended-context transformers within a proposed "Token Economics" framework. The topic is timely and addresses relevant system-level constraints such as memory bandwidth, energy efficiency, and scalability.

However, the work does not introduce new architectural methods or validated analytical models. The Token Economics framework aggregates known cost dimensions without demonstrating formal novelty or predictive capability. The experimental methodology lacks clarity and reproducibility, and several reported results appear to synthesize prior studies rather than derive from controlled experiments.

The paper is best understood as a broad architectural overview with limited empirical grounding. While the discussion is directionally correct, the contribution remains conceptual. I recommend weak acceptance (poster), contingent on positioning as a survey-oriented work rather than a research contribution.

----- REVIEW 2 -----

SUBMISSION: 43
TITLE: Advantages and Disadvantages of Modern Language Models

----- Overall evaluation -----

SCORE: 1 (weak accept)

----- TEXT:

This paper focuses on a practical and urgent issue in the current architecture design of Large Language Models (LLMs): how to balance performance, inference efficiency, memory bandwidth, energy consumption, and infrastructure scalability in the context of continuously expanding model scale. The author proposed the "Token Economics" evaluation framework, which systematically compares and analyzes the extended context Transformer and retrieval enhanced generation (RAG) architectures from five dimensions: per token processing cost, memory transmission cost, context management cost, retrieval cost, and energy cost. The paper also incorporates the latest memory

efficient technologies such as FlashAttention, Ring Attention, and Infini attention, and discusses real-world productivity impacts (such as GitHub Copilot research), labor market exposure (Anthropic Economic Index), and environmental sustainability issues.

----- REVIEW 3 -----

SUBMISSION: 43

TITLE: Advantages and Disadvantages of Modern Language Models

----- Overall evaluation -----

SCORE: -1 (weak reject)

----- TEXT:

The paper compares RAG and extended-context LLM architectures using a proposed "Token Economics" framework. While the topic falls within the conference scope, several issues limit its suitability.

- 1.Limited Educational Relevance: Despite the topics being in scope, the paper makes no meaningful connection to computer science education. The analysis focuses purely on LLM infrastructure efficiency and energy consumption.
- 2.Lack of Original Experimental Data: The paper claims comparative experiments but provides no concrete setup, datasets, or original empirical results. The findings largely reference prior work rather than presenting the authors' own data.
- 3.Writing and Structure: The manuscript is redundant and reads as an extended literature survey. It would benefit from focusing on a narrower set of contributions and providing clearer original insights.
